

TECHCRETE

FLEXIBLE CONCRETE REPAIR SYSTEM

Techcrete is a Highways England approved hot applied thin repair system for concrete highways and runways.

Unlike conventional epoxy or cementitious systems which fail due to de-bonding, fatigue and differential expansion characteristics, the Techcrete range of products are designed to extend and compress with the expansion and contraction of the pavement, without the need to reform joints through the repair. Techcrete produces the ultimate flexible repair to the persistent problem of repairing concrete pavements.

BENEFITS:

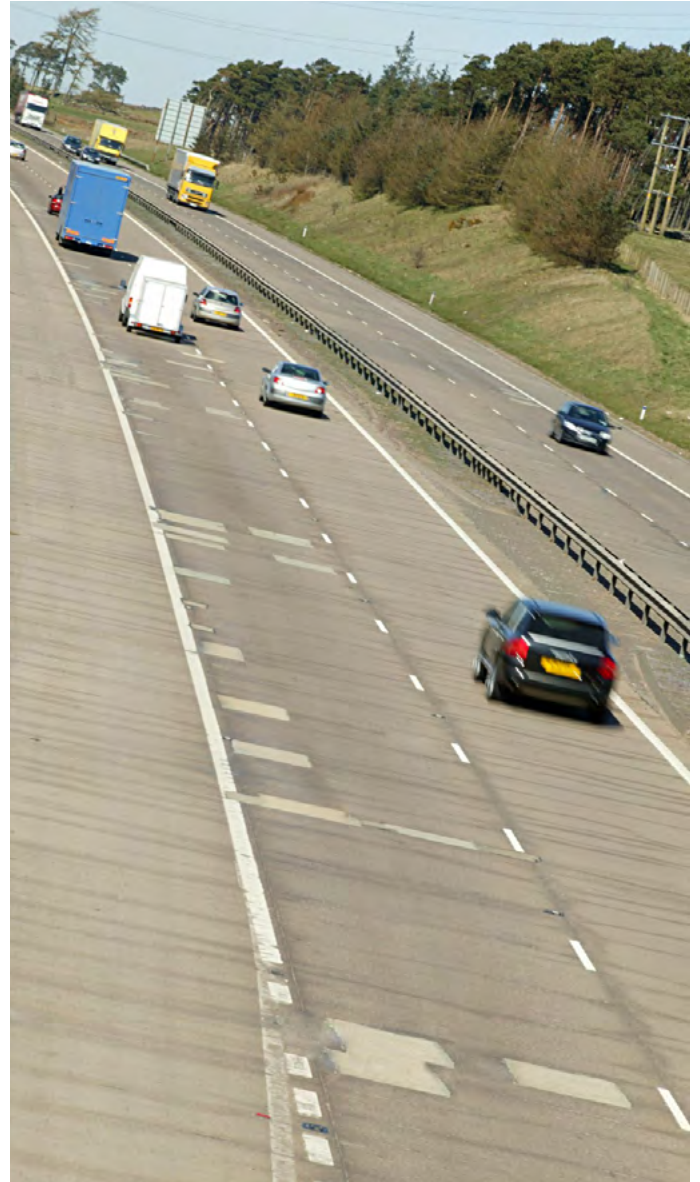

- Permanently flexible
- Compressive resistance
- Excellent adhesion
- High tensile strength
- Fast recovery under "live loading"
- Approved by the Highways Agency

APPLICATION:

- Recessed crack repair
- Multi corner slab repair
- Airports
- Concrete highways
- Potholes in concrete

IMPORTANT NOTES:

Storage and handling: Packed in 25kg low melt PE bags, shelf life approx. 12 months, protect from sub-zero temperatures.

Disclaimer: All products should be used in accordance with the manufacturer's instructions. No responsibility can be taken by the manufacturer where conditions of use are beyond our control. Materials are sold only on the basis of conforming to specification, but without warranty expressed or implied in law or in fact of merchantability or fitness for a particular purpose and upon the condition that purchasers make their own tests to determine the suitability of such products for their particular purpose.
